Mines and Mining--Activities in Ore Districts of Utah

GOLDFIELD MINE

Copper and Silver Ore Tonnages.

Depends Upon the Quantity Developed of This Sort

of Ore.

GOLDFIELD, Nev., March 29.—From present indications and available information it appears probable that the prothe Goldfield Consolidated Mines company in March will be shown by the monthly report to be the largest any single month in a long time. In addition to the large tonnage of ore treated by the company's 100-stamp mill, averaging 960 to 980 tons daily, a considerable quantity of smelting ore has been shipped to the Miller's sampler of the Western Ore Purchasing company.

This product has been of uniformly excellent grade, but owing to its content of silver and copper it is not readily amenable to treatment by the processes amenable to treatment by the processes employed in the company's mill and the recovery effected by smelting is suffi-ciently better to offset the additional cost for transportation. It is regarded as highly probable that if the deposits of ore of this character prove to be of great volume on the deep levels of the mines, the company will erect a smelter or rousting plant to enable it to treat this ore locally

High Values Deep.

Developments of the greatest importance have been made recently in the mines of this company and the average grade of ore treated in the mill has shown a gratifying advance. The latest final report of the management was for the month of January and in this report it was set forth that in the Laguna mine, at a point above the 500-foot level and in the downward extension of the great Red Top vein, an ore body had been exposed and developed to some extent which yielded average assays of \$50 per ton across sixteen feet. The same ore body, but of lower average grade, had also been opened above this point and now it is stated here that the ore has been exposed sixty feet blow the lower point.

This is but one of several important developments. Some three months ago the management reported an ore body of large volume opened in the Combination mine, near the western boundary of the properties and the most westerly of any important discovery in this territory. The deposit was opened on the 130-foot level and development showed it to be the extension of the famous "glory-hole" ore body, that yielded several millions in rich, free-milling ore. Later work in this ground showed the ore body to be of vastly greater volume and better average grade than was at first supposed. When it had been opened for a distance of about 100 feet and its widest point was shown to be about forty feet, the company's engineers estimated that at that time and on that level alone the ore exposed would add at least \$500,000 net to the visible ore reserves of the mine. Since then it has been opened for considerably over 200 feet in length, with an average width of forty feet, and the average grade of the ore, believed at first to be ground \$20 per ton, is much better, the ore extracted having yielded an average of better than \$36 per ton. ower point.
This is but one of several important de-

Clermont and Laguna.

Operations at other points on these properties have been attended by highly satisfactory results. The Clermont mine has been producing a large tonnage of ore that, has averaged around \$40 per ton, and including some high grade. The Laguna ore contains specimens of exceedingly rich material and the Mohawk mine continues to turn out a large tonnage of good mill ore. At the time of the last complete report the ore body of the Grizzly Bear had not been developed sufficiently on the 1400-foot level to determine its importance, but it is said that this ore, discovered on the 1300-foot level and between this point and the 1000-foot level and between this point and the 1000-foot level of the Clermont, the two mines being connected at depth, is coming in strong at 1400 feet depth. It is this ore from the deepest levels that is refractory and that is shipped direct to the smelter.

The new work on the Goldfield Ore

level of the Clermont, the two mines being connected at depth, is coming in strong at 1400 feet depth. It is this ore from the deepest levels that is refractory and that is elipped direct to the smelters.

The new work on the Goldfield Orocompany's main shaft will be completed within estimate with compressor, machine drills and pumps, and sinking will begin with the object of salming the 1600-foot level as rapidly as possible. On the 200-foot level as rapidly as possible. On the 200-foot level as station has been cut and some development work will be done at this depth, where the work of enlarging the shaft has exposed as strong vein of good appearance. At this depth, in territory of the Consolidated, adjoining the Oro on the south, deposits of great value have been found and there is every instituction for exponent work will be done at this level while sinking. The strong of the constituent of the south, deposits of great value have been found and there is every instituction for exponent work with the northern extension of the event of the Columbia Mountain fault ore channel, and mining men generally, who are familiar with this ground, are confident that Important ore bodies will be found within the Oro boundaries.

Jumbo Extension.

Jumbo Extension continues its regular output of about 1000 tons monthly, the product being shipped to the Bonnie Clare mill, thirty-eight miles south of Goldfield and now under lease to the Humbo Extension company. It is said that the mine is in better condition and with a larger volume of ore reserves than at any time in the past, the great vein having a trend across the Polevorde claim from the Clermont to the Merger ground, containing three ditinct and large ore shoots, all of which show wide fances of excellent material on several levels. An arrangement is under consideration for the Florence Goldfield company to use ten stamps and the cyanide department of the Bonnie Clare mill, as the Jumbo Extension ore cannot be treated by cyanidation and the company is using only ten of the twenty stamps.

Sinking continues on the Merger ground, the shaft being down hearly 1600 feet and the deepest in the Goldfield district. Shipments continue from the Vernal and from the Nevada Eagle property, four miles west of town. The Booth, Blue Bull, Sandstorm-Kendall, C. O. D. Consolidated, New Jersey Mines and others are developing. Jumbo Extension.

AN IMPORTANT SUIT

That Sustains His Case Completely.

brought by Lee Mantie, former owner of several claims now owned by the Jack Walte company, in which Mantie asked for an accounting to determine what sum the defendants still owe on their stock agreements, and further asking that the officers be enjoined from incurring further indebtedness in the name of the company, was hit hard in the district court last week when Judge W. W. Woods handed down a decision in favor of the plaintiff. The defendants named in the compalant were Fritz Marschante, Robert Sheffels, Lewis Adams, John Daley and the Jack Walte Mining company.

Mantle complained that on November 1, 1909, he was the owner of the Buillon, Croesus, part of the Mantie fraction and Lucky Boy lodes, all lying in the Eagle district, and that on that date he entered into a lease and contract of sale with Patrick Burke for the property for \$187,000; that afterward Burke secured options on the remaining portions of the claims from other people for \$33,000, making the total purchase price \$250,000, the initial payment on all of which was to be \$75,000; that afterward Burke secured for \$187,000; that afterward Burke secured for \$180,000; the secured for \$187,000; the initial payment on all of which was the secured for \$180,000; the secured for \$180,000; the

are fully paid, making absolutely void the sale of Mantle's stock for delinquent assessments. It is said that the officers of the company will not appeal the case.

GIZZARD GOLD HAS A NEW VARIATION

The world frequently hears of gold being found in the craws of chickens, and the finder proceeds in the attempt to find out where the chicken came from Nevada has an interesting variation of this procedure. In the Athens district of Nevada a miner had panned out some rich rock and had left the pan with several small nuggets exposed. The nuggets disappeared and the mystery was not solved until a chicken was killed for dinner and the nuggets were found to the extent of \$3 worth in the crop. It happens that there was about \$18 worth of gold in the pan, so all the chickens were killed and the gold recovered. Even the chickens in Nevada are thoroughly imbued with the gold fever. Nevada has an interesting variation

NEVADA MINING MEN FORM ORGANIZATION

Following the lead of Idaho, the mine operators of the state of Nevada have formed what will be termed the Nevada Mine Operators association, the purpose of which will be the promotion of the general welfare of the mining industry of the state. The Tonopah Bonanck announces that there attended the meeting of organization representatives from Tonopah, Goldfield, Blair, Fairview, Wonder, National, Viginia City and a number of other mining districts of the state. The initial meeting was held at Tonopah in the offices of the Tonopah Mining company and the Sentiment expressed at the meeting was that the organization would be a live one financially, physically and morally.

Their will be seven members of the executive committee, six of whom have been selected. These six are Albert Burch W. A. Bradley, Fred J. Siebert, John G. Kirchen, Frederick Bradshaw and W. H. Blackburn. W. B. Alexander is the secretary and treasurer of the association. A good, lively state association in Neward or any other state can be made a powerful factor in building up an industry and in protecting the public as well as the operators and miners. The Neward ansociation within a few weeks will have a large and entimers. The Newards association within a few weeks will have a large and entimisantic memi-livership.

LOOK ENCOURAGING FRIEND OF MINING

Silver Is Only a Commodity.

AFFECTED BY MARKETS

London Firms Differ in Their Opinions About the Metal Markets.

Samuel Montagu & Co. of London in their March 18 circular on silver handle the white metal situation in a thorough and not very encouraging manner. The circulars of this firm are widely read and the firm is considered authority on this subject owing to its prominence in the silver metal world. In regard to the

silver outlook the circular says in part: The position of silver is disappointing, but it can hardly be expected to improve while financial conditions continue to be so adverse to prices generally. The advance of the pre-

generally. The advance of the pre-mium on forward silver to 5s 16d—a figure not reached since December 2s, 1907—Indicates how much money af-fects silver.

The Balkan war still casts a gloomy shadow over markets, and there is, of course, a possibility that money tension may become still more acute before the present stringency can be relaxed.

Money Market Adverse.

The natural apprehensions arising from these events no more encourage fresh commitments in silver than in any other commodities, and the very fact that the money market is in an unfavorable condition for borrowers would probably defer the actual issue of the Chinese government loan, even though an agreement were arrived at as to details, and, therefore, silver remittances to China, which are expected to be a consequence of that loan, are relegated to a future not yet defined.

defined.

The need of an abundant currency of smaller denomination than can be minted conveniently in gold is shown in the case of our West African colonies. In addition to the native forms of currency which will be superseded by the projected issue, large quantities of British silver coin, of which no less than five and one-half millions sterling have been introduced by the Bank of British West Africa, Ltd., since 1894, will doubtless be withdrawn from circulation. Thus, during the nineteen years in question, the population of about 20,750,000 souls has required for the purpose of currency about 5s 4d in silver coin per head.

This proportion is remarkably close

or currency about as 4d in silver coin per head.

This proportion is remarkably close to that of India, where about 1,450,-000,000 rupees have been coined and issued during the same period. If allowance be made for recoinages and exports, the sterling value of silver coins per head of the Indian population has been within a few pence of that required by the trade of West Africa.

Situation Elsewhere.

The use of cowries in West Africa is chiefly confined to the hinterland, as Nigeria and the Gold Coast possess some metallic currency of small denomination.

The stock in Bombay has fallen in value from £1,820,000 to £1,640,000; the offtake has increased from 110 to 140 bars a day.

No change is reported in the weight

of the stock in Shanghal, but the fall in exchange reduces the value to £4,240,000.

£4.240,000.

The corner for delivery in Bombay is less acute, but one of great severity has arisen in Calcutta, where the premium for cash delivery is now between 9 per cent and 10 per cent on the price for forward delivery. The Calcutta market is quite small compared with that of Bombay.

A shipment of £40,000 has been made from San Francisco to Hongkong.

Another prominent London firm—Mocatta & Goldschmid—takes a more cheerful view of the silver market outlook It says, referring to the depression produced by China's sales: "The present level, however, is lower than at this time last year, before the Indian government commenced to buy, and since the Indian currency returns (apart from the gold standard reserve) show the stock of rupees held to be less than it was then, in spite of the large purchases since made by the government, bear sales at present prices would appear unattractive if not dangerous, should trade in India be nearly as good as last year."

FINAL CLEAN-UP AT

THE COLORADO MINE

The Colorado Mining company, once one of the mass speciacular preducers and dividend parent of Utah, during the past week made its final cleanup at Tiutic, and the property will not be seen in the producers and doubtless it will be produced. The Colorado relains about 215,000 in list treasury, and it has paid \$2,600,000 in dividends, or \$2.60 per share.

New York William Standard Colorado relains about 215,000 in dividends.

BONANZA CAMP ON VERGE OF A BOOM

The Challis Messenger says that there is going to be a splendid boom during the summer at the Bonanza camp and that there are a number of Sait Lake capitalists operating there who will profit generously by this era of prosperity. The new mill of the Bonanza Gold Mining company, a Utah-Idaho corporation, will be ready for operation in May, while hearby a new company has been formed to operate the Runover group of claims owned by Senator Macbeth and associates.

owned by Senator Macbeth and associates.

It was the Eunover property that afforded no end of interest in 1907 by virtue of its gold one showings, the property having been tramped over by sheepherders, prospectors and travelers generally without any suspecting the richness of the outcroppings.

The plan is to placer mine this section as well as drive to depth for gold, and the Idaho and Utah capitalists interested, it is freely predicted, will open a producing proposition that will make some enviable history for Idaho in 1912.

to Revision of Tariff on Metals.

While in Spokane last week, United States Senator James H. Brady of Idaho placed himself squarely upon record-as opposed to any reduction in the lead and zinc tariff schedules in the coming session of congress. He added that he would exert every effort to defeat the drastic schedules in the Underwood bill of

The senator was quoted in part as follows:

follows:

I am convinced that many of Idaho's lead and zinc mines, particularly in the Coeur d'Alene region, will have to suspend operations if the announced tariff policy of the present administration is carried out. The Democrats contemplate reducing the lead-zinc tariff about 50 per cent, at the same time making the duty advalorem instead of specific, but I am hopeful that the friends of the mining industry of the United States will be able to prevent the cut being made. I am inclined to believe many of the southern members of congress will not favor any material reduction in the metal tariff, and I am confident those from Missouri and the lead-mining states adjoining will stand with the Republican members to defeat this schedule in the Underwood bill.

PEACE DESIRED ON FOREST RESERVES

For the purpose of bringing about closer relations and a more amicable understanding between the United States forestry service and the western mining industry, a central committee and sub-committees in the various states have been determined upon to which all dis-putes may be submitted for adjustment. The Spokane section of the American Mining congress has addressed a letter to Secretary Callbreath at Washington in regard to this matter, of which the following is a brief excerpt:

Our directors believe that the Min-

Our directors believe that the Mining congress can perform a useful
service if it can bring about a more
harmonious relation, and to this end
it has been decided to appoint a
central committee to be located at
Denver, and a sub-committee in each
of the states; the sub-committees
to receive and pass upon the merits
of all complaints within such states
and, after proper investigation, to
take up the matter of the complaint
with the local forest official, with a
view to some satisfactory settlement.
In case no such settlement cen be
reached, the secrate sub-committee is
to report its findings and recommendations to the general committee at
Denver, which, in turn, will pass upon
the merits of the complaint, and its
recommendations will form the basis
of the action of this congress as a
whole.

It is planned that those complaints

recommendations will form the basis of the action of this congress as a whole.

It is planned that those complaints which are of sufficient merit shall be forwarded to this office (the Washington office) with instructions to take up the matter direct with the chief forester, and if no proper redress can be secured, to take the dispute to a higher authority.

The Mining congress believes that the national forests ought to stimulate rather than hinder mine development; that the people residing in the communities should feel a warm sympathy for and a desire to co-operate with the forests service, in the prevention of fires and in the protection of the forests from devastation of any sort; in other words, that the forests should serve the highest use to the communities located in their neighboring vicinity; that all unnecessary waste should be prevented; conditions which can only exist where there is a mutual interest existing between the forest officials and a Mining congress committee, a better understanding can be reached, unfair criticisms be silenced, and fair demands in behalf of the mining men and the community generally may be promptly and cheerfully met.

THE COLORADO MINE

James A. Pollock & Co., bankers and brokers, furnish the following, received over their private wire yesterday after-noon:

COPPER MINE IS A BIG LEAD PRODUCER

Roasting Plant Likely for Lee Mantle Gets Decision Shaft at Depth Nearing Body Money Tension Is Acute and Goes on Record as Opposed Utah Consolidated Has Made Old Blue Wing Mine, On an Interesting Change in Its Character.

> Perhaps nothing has struck Utahns more forcibly during the past few weeks than the brief extracts from the report of the Utah Consolidated company, show ing how remarkably this famous old copper producer of Bingham is changing its character from copper to lead. Its 1911 copper production was 9,162,023 pounds.

per producter of Bingham is changing its character from copper to lead. Its 1911 copper production was 9,162,023 pounds, while its lead output was 3,311,389 pounds of lead. That the lead ores carry a larger percentage of silver and a smaller percentage of silver silver silver percentage of silver silve

Elko, which was recently purchased by the company.

Mr. Kellogg spent a week here loading a car with machinery and mine equip-ment from the company property in this district to be used at the Copper Queen. A force of eight men is now employed at the new mine erecting buildings need-ed and the property will soon be in good working order.—Ely Expositor.

AUTO CROWDS OUT THE PATIENT BURRO

There is another stampede on in Nevada. This time the new camp of Republic is the target and it is located about thirty-five miles north of the Tonopah camp. The stampeders are utilizing automobiles to make the journey and the patiet burro, once the pricipal means of travel across the deserts, is thus crowded from the trails with as little compunction as the average Nevada stampeder abandons the last brilliant prospect for the new. Republic is said to show assays running into the hundreds and nothing else is needed to set fire to the average Nevadan, ever on the alert for something different.

CHIEF CON, SENDING DEEP DRIFT AHEAD

The Chief Consolidated management has started frifting towards the ore on the 1500-foot level, the deepest working attempted for ore, and atten-tion will be centered on this effort widely as there is a large Michigan and eastern whereholder interest in the company. The Chief chaft several weeks ago encountered the water level at a depth of 1815 feet. The company is one of the largest producers of Tintic, and one of the dividend pay-

Ore and Bullion.

The ere and builton report for Saturdar, given by McCornick & Co., was as follows: Ore re-ceived, \$16,000; builton shipped, \$75,000; total, 1001,000.

Producer, Will Be Give Attention.
